

Go To Google.com

1) Reframing the question:

1. How can I go on my phone to access google to look for cat shops

2) Identifying the metrics:

1. Do I have the internet?
2. Do I have a device?
 - a. Do they work?
 - b. Do they have a browser to access google.
3. Do I have the web browser or app?
4. Is there access to a keyboard or online keyboard to use?
5. What are you looking for?
6. How long are you on the internet?
7. What percent is my phone on?
8. Do I know where the search bar is?
9. How much time does it take for it to load?

3) Retrieve/ Collect the data:

1. I can buy a computer or phone if I don't already have one from Best Buy (same with keyboard)
2. Buy wifi or data from a carrier store
3. Download a search engine on the computer or on my phone from the internet
Find on the google what i am looking for by typing in the search bar on the top of the screen
4. Then navigate the search result to see what they are looking for.

4) Data preparation:

a) Get the computer or phone as well as stable wifi to use the internet. Have a stable connection and go on the search engine google.com and look up cat shop near the area.

5) Doing the analysis:

- a) I type in google.com in the search bar "cat shops near my area" and press enter and then click on the link that takes me to google.com.

6) Tell the story:

a) I first checked if i had a device where I could search something up. If i didnt then I could have gone to buy one. Since I already have a phone I then check if I have good wifi and stable connection in my area which I have. Then I make sure to have any web browser on my phone installed (which I do). Click on the web browser and type into the search box, search "cat ships near me" in the Google.com, and it takes me right to it.
