Put On A Coat

1. Reframing the question:

1. How to put on a coat on a winter day

2. Identifying the metrics:

- 1. What's the weather today?
 - a. Will it change later in the day to be hotter or colder?
 - b. What time am I going outside?
 - c. What temperature is it?
 - d. What types of jackets am I going to wear?
 - e. What color is it?
- 2. Will I wear heavy or light clothes under the jacket?
- 3. Do I have a coat?
- 4. What's my size?
- 5. Is it cold outside?
- 6. Do I need a jacket?
- 7. How cold is it outside?
- 8. How long am I outside for?
- 9. How much does the coat cost?
- 10. Where am i communing to?
- 11. When will i be leaving?

3. Retrieve/ Collect the data:

- 1. Get a coat that's my size- XL
- 2. I have 2 heavy coats and 1 light coat
- 3. Its 40 degree F as of the morning of a day
- 4. So i am going to wear the yellow heavy one, with black pants and a blue sweater and black shirt
- 5. Its might get colder at night time
- 6. I am outside walking the streets for 30 minutes.
- 7. Yellow coat cost 70-90 dollars
- 8. Not snowing or raining
- 9. The coat has a hoodie
- 10. I will be commuting around 11 to city college.

4. Data preparation:

- 1. Weather 40 degree F
- 2. Outside doe 30 minutes
- 3. Having multiple layers

5. Doing the analysis:

- 1. On extremely cold or windy days, a thicker coat and additional layers are more suitable.
- 2. If the coat has adjustable features like a hood or cuffs, use them to keep out cold air.

6. Tell the story:

1. I first check the weather and see that it will be cold. Knowing this information, I came to the realization that indoors the heat will be on so I don't want to wear anything heavy indoors otherwise I will start to sweat a lot, so I decide to wear light clothes. Then after I put on my clothes such as a t-shirt and sweater. And I wear my coat. After putting the coat on I zipped the coat up to make sure that no air could hit my chest and potentially make me sick. Then I go outside around 10pm to commute to city college for my first class.
